Grease+Gard™ Retrofit Skimmer and Grease Recovery Device

How it Works

Grease+Gard™ uses a heater and belt technology to skim the grease out of the interceptor.

Grease Reservoir

Grease+Gard's trough has one of the industries most aggressive slopes. This helps gravity feed the grease to the grease container and also reduces the cleaning cycle of the grease trough.

Skimmer Belt and Blades

The skimmer belt goes through the skimmer blades and wipes the grease off of the belt and gravity feeds the grease down the trough into the grease container.

Grease+Gard™ Skimmer

Grease+Gard™ is a completely sealed device to prevent unpleasant odors.

Grease is removed from the unit because its viscosity allows it to stick to the belt.

Thermostat Heater

Outlet

The Grease+Gard™ Retrofit Skimmer

Grease+Gard™ is an automatic grease recovery device that relies on a belt and heater assembly to pick up the grease. The Grease+Gard™ Skimmer can be retrofitted on any grease interceptor, metal or plastic, or can be purchased as a system complete with a grease and solids interceptor.
