

RAINWATER FILTER COLLECTOR FOR A ROOF AREA UP TO 2,000 SQUARE FEET

STANDPIPE DOWNSPOUT FILTER COLLECTOR FOR BELOW GRADE APPLICATION

FUNCTION: Connects to a single vertical rainwater downspout and can filter up to a 2000 square foot roof area for irrigation, car washing or other non-potable uses. Filter can be partially buried. The standpipe downspout filter collector is installed in the vertical rainwater downspout piping partly below grade to remove debris to the storm water system and divert 90% of the clean rainwater to an underground storage tank. The filter operates as a first flush device.

Fig. RH9511-04....4" NO-HUB OUTLET (WISY SF0304)
* Sized to accept Downspout Converter and 4" S & D Pipe

REGULARLY FURNISHED:

- Stainless Steel Filter (RH9511-04), 280 micron
- Stainless Steel Fine Mesh Filter (RH9511F) and Downspout Converter Kit (specify):
- 2" x 3" Downspout Kit (RH9510DK3)
- 3" x 4" Downspout Kit (RH9510DK4)

ACCESSORIES:

- Blind Insert (RH9510BI)
Used in place of the mesh filter to divert flow directly to the storm water system. Stainless Steel.
- 1" Flexible Hose with 2" Connection for Downspout Filter (RH9510TH)
- Downspout Clip with Screw and Wall Plug (RH9510SC)
For securing the filter unit to a wall.

NOTES: Filter Collector must be mounted plumb for proper operation. A 90° elbow or optional 1" flexible hose (with 2" connection) must be installed directly on the 2" outlet to assure proper filtration. A coarse mesh filter (RH9510C) is available for areas prone to excessive particulate matter in the air, such as dust or pollen. For a roof area above 2000 square feet, additional standpipe downspout filter collectors should be added.

NOTE: Dimensions shown in parentheses are in millimeters.

RAINWATER FILTER COLLECTOR

FOR A ROOF AREA UP TO 2,000 SQUARE FEET

STANDPIPE DOWNSPOUT FILTER COLLECTOR FOR ABOVE OR BELOW GRADE APPLICATION

Principles of the WISY Filter Collector – RH9511-04 (WISY SF0304)

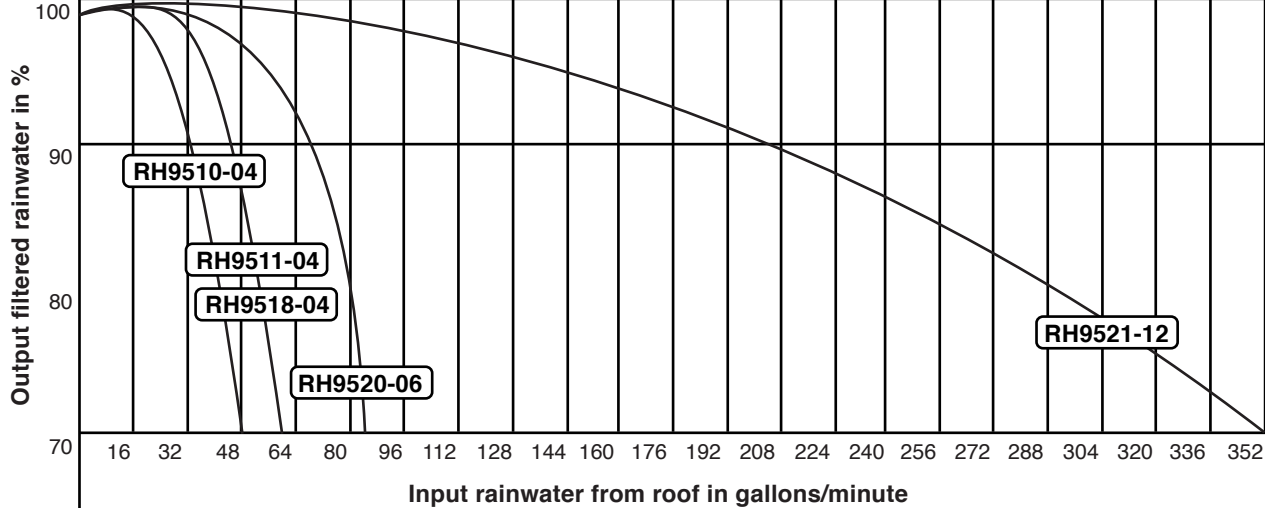

The Filter Collector filters and collects rainwater over the entire rain event. When dry, the filter acts as a first flush device during the first 20 seconds of rainfall. It also helps aerate the rainwater.

The filter has a self-cleaning effect. Depending on the amount of rainfall and debris filtered, the stainless steel fine mesh filter should be cleaned about 1 to 4 times a year in a dishwasher or by hand. The circulating air within the main housing of the Filter Collector dries the stainless steel fine mesh filter thus lowering the demand for more frequent maintenance.

To safeguard against backflow the top of the upper housing needs to be installed more than 10 inches above grade.

WE CAN ASSUME NO RESPONSIBILITY FOR USE OF SUPERSEDED OR VOID DATA

Efficiency Ratio and Performance Chart

Select the appropriate filter based on your filtration needs and design flow rate.

Our filters efficiently recover the rainwater for various flow rates, i.e. for 90% filtered water you can select*:

- RH9510-04 for up to 32 gallons/minute flow rate
- RH9511-04 for up to 42 gallons/minute flow rate
- RH9518-04 for up to 42 gallons/minute flow rate
- RH9520-06 for up to 65 gallons/minute flow rate
- RH9521-12 for up to 208 gallons/minute flow rate

*Efficiency ratio tested with brand new filters
